# OUR FIVE-STAR COLLECTION ON CLUTCH

Magora Systems is a team that was built on helping achieve our potential value with customized tools that worked to our unique strengths. This bespoke approach can only be carried out by the best professionals in the digital industry, which are exactly who we have.

The work we do for our clients is especially designed for them and it's something they seem to truly appreciate. Don't take our word for it though, just look at the reviews they send us and what they say about our work.

This example is only the latest in a large collection of feedback we've earned over the years.

THE REVIEW

"Our product owner
went to great lengths to
speak over the phone
any time it was
required."

◀▶ magora

Together with this video production company we built a web app where they can consolidate their systems and processes. We were selected for the engagement because our team was able to quickly understand what they wanted to do and provide insight into what can be done to reach their goals.

Thanks to the high score that this piece of feedback added to our cumulative rating we were included on the top 100 .NET developers list on Top Design Firms. They are another B2B platform that creates rankings of top-performers in various industries.

Our inclusion in one of their lists is a big step even for a team like ours who have more than a decade of experience in the industry. We can leverage their high traffic to get more attention from potential clients and get selected for more projects.

Whether a B2C or a B2B project, start-up MVP or a bespoke enterprise solution, first of all, Magora takes the time to understand a business, a product and the end-user's needs. Magora offers a Discovery program, a research period that is undertaken at the very start of a project. This is a practical step. It helps you to fine-tune a concept while meticulously planning design and development.
